Complete Reference on Ms Word Equation Editor Shortcut

Ms word

We use cookies to ensure that we give you the best experience on our website. If you continue to use this site we will assume that you are happy with it.

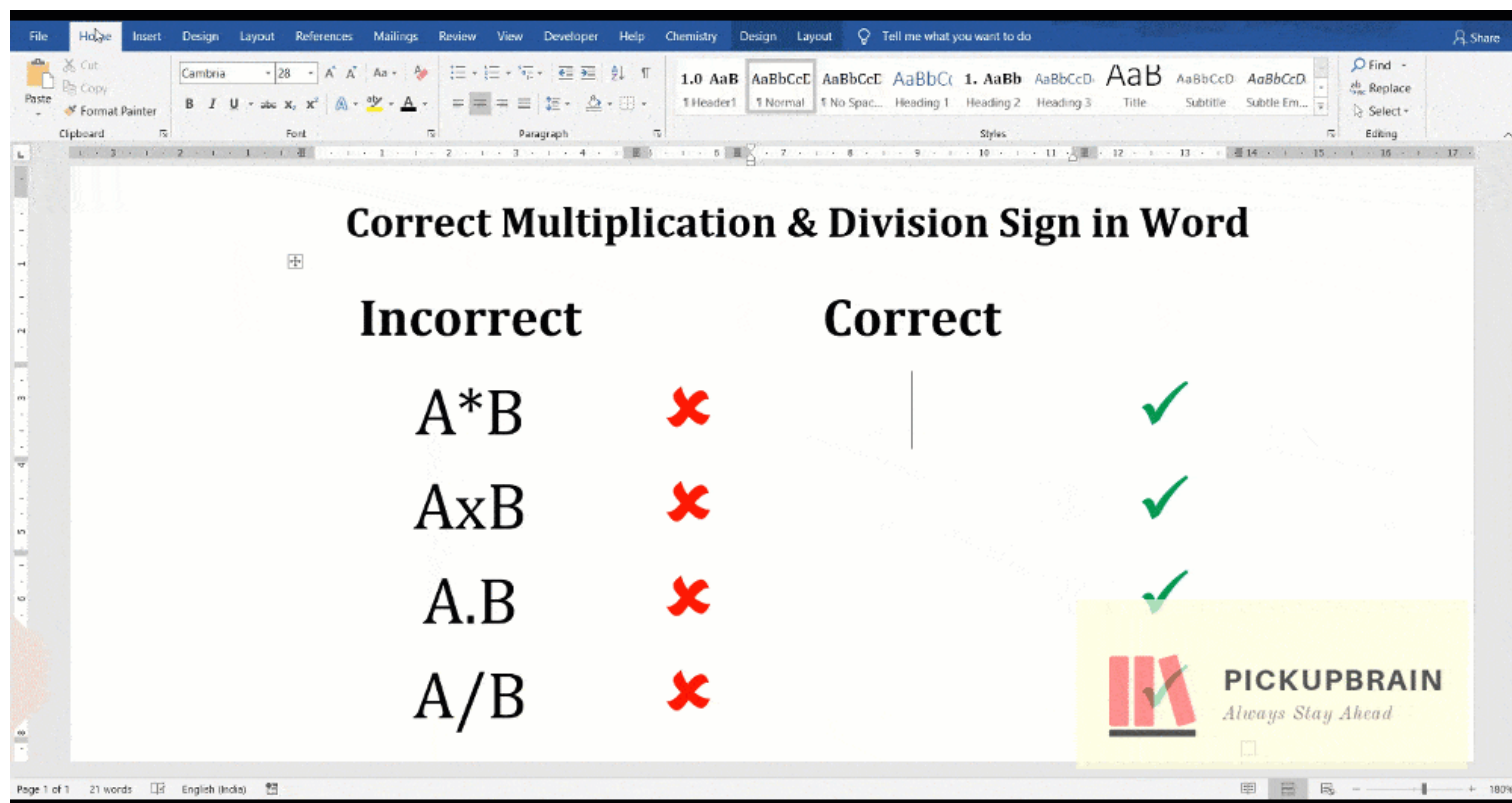

Ok Privacy policy

LaTeX type equation editor shortcut feature for typing equation. These equation editor shortcut as termed as **Math AutoCorrect** and are available in versions of Microsoft Word 2007 and above.

Equation editor shortcut has a potential to save a lot of time and effort. For e.g., to get Greek letter α , you can type `\alpha` instead of going to Symbols in Insert Tab and searching for α .

Enabling Math AutoCorrect

Most version of Microsoft Word, Math AutoCorrect is enabled by default. To ensure you can visit, **File Menu** → **Options** → **Proofing** → **AutoCorrect Options** → **Math AutoCorrect** and ensure box against "*Replace text as you type*" is checked. These shortcut work only inside Equation Editor. However, if you want to use it outside Equation Editor, then check "*Use Math AutoCorrect Rules outside of math regions*"

How to enable math autocorrect outside math region in Microsoft Word

Equation Editor Shortcut

Shortcut to get equation editor in Ms Word and Power Point is "**Alt + =**" (i.e. hold down Alt key while typing '='). Although you can also click on "Equations" under the "Insert" Tab to get it.

We use cookies to ensure that we give you the best experience on our website. If you continue to use this site we will assume that you are happy with it.

Latest keyboard shortcut for equation in Word similar to LaTeX

Subscript & Superscript

Equation editor shortcut for subscript and superscript is `_` and `^`. Anything after `_` or `^` will get converted into subscript or superscript respectively, after hitting space. To include space in subscript or superscript, group them in `()` or parenthesis. These grouping parenthesis don't appear after Math AutoCorrect. Grouping is also important as it distinguish between a_i^2 and a_i2 . While adding pre-subscript or pre-superscript, use `\zwsp` along with `_` and `^` sign as shown below.

Smartest way to type equation in equation editor in Word (similar to LaTeX): Supers...

Use	For	Use	For
A_circle<sp>	A_{circle}	r^2<sp>	r^2
A_(big circle)<sp>	$A_{big circle}$	H^(2 square)<sp>	$H^2 square$
r^2_outer<sp>	r^2_{outer}	r^2_(outer circle)	$r^2_{outer circle}$
\zwsp<sp>_c<sp>	cR	\zwsp<sp>^c<sp>R	cR
\zwsp<sp>_c^d<sp>R	c^dR	\zwsp<sp>_c^d<sp>_e^f<sp>	$c^dR_e^f$

Equation Editor Shortcut for Subscript and Superscript in Ms Word

Letters

Blackboard Bold letters or Double letters:

Use \doubleXX, where XX is the required uppercase letter for e.g. use \doubleA for \mathbb{A} and \doubleR for \mathbb{R} .

Fraktur letters

Fraktur is a calligraphic hand of the Latin alphabet. We can easily write it in Ms Word using \frakturXX where XX is an uppercase letter. For e.g. use Ms Word shortcut "\frakturB" for "B" and "\frakturG" for "G".

Greek letter

Greek letter has 24 different alphabets. There are four distinct ways of typing Greek alphabets in Microsoft Word. Of these, Math AutoCorrect method is the easiest to remember and the fastest.

We use cookies to ensure that we give you the best experience on our website. If you continue to use this site we will assume that you are happy with it.

\alpha for α) and for upper case Greek Alphabet type name of Greek letter after \ in Title Case (e.g. \Gamma for Γ). You can also use [Alt codes for typing Greek letters](#).

Tilde	\tilde{x}	<code>x\tilde<sp></code>
Left vector (or left arrow)	\overleftarrow{x}	<code>x\lvec<sp></code>

Ms Word shortcut for Accents

Grouping and brackets

Equation editor causes brackets (such as [], {} and ()) to grow to fit the size of expression within them. However, parenthesis used for grouping are not displayed in the final formatted expression. However, when parenthesis is required to be displayed, it must be doubled (one for grouping which will vanish in final formatted expression and other for displaying). Escape sequence (\ followed by desired bracket is used to prevent bracket from being reformatted.

To Display	Use	Comment
$\frac{a}{y}$	<code>x/y</code>	/ is used for fraction
$\left[\frac{x}{y}\right]$	<code>[x/y]</code>	[] bracket automatically expands to adjust fraction
$\frac{x}{y}$	<code>{x/y}</code>	
$\left(\frac{x}{y}\right)$	<code>(x/y)</code>	Parentheses displayed as they not used for grouping
$\frac{a}{p+q}$	<code>a/(p+q)</code>	Parentheses used for grouping (denominator here) are not displayed
		Parentheses used for grouping (denominator here) is not

We use cookies to ensure that we give you the best experience on our website. If you continue to use this site we will assume that you are happy with it.

◀ Previous Next ▶

For more details and example, visit our [blog](#) on different methods and equation editor shortcut for typing matrix in Ms Word.

Piece wise function

There are two ways to insert piece wise function in using Equation Editor shortcut in Ms Word. First one uses `\cases()` method while the second one uses `\matrix()`. In both the cases, desired piecewise functions are entered inside the parenthesis.

Like matrix, @ is used as a row separator. To get only the opening curly braces 'f' which automatically extends the height of piecewise function, use `\close` in place of closing 'f'.

Show entriesSearch: Equation editor
shortcut

Output

Note

f(x) =
`{\cases(x,x>=0@-x,x<0)\close`

$$f(x) = \begin{cases} x, & x \geq 0 \\ -x, & x < 0 \end{cases}$$

@ is used as row separator and `\close` is required to ensure opening { expands vertically to cover all cases

f(x) = `{\matrix(x & x>=0@-x & x<0)\close`

$$f(x) = \begin{matrix} x & x \geq 0 \\ -x & x < 0 \end{matrix}$$

Similar to above, & is used as column separator

We use cookies to ensure that we give you the best experience on our website. If you continue to use this site we will assume that you are happy with it.

Ok [Privacy policy](#)

$f(x) = \begin{cases} x & x \geq 0 \\ -x & x < 0 \end{cases}$

$$f(x) = \begin{cases} x & x \geq 0 \\ -x & x < 0 \end{cases}$$

Without `\close`, opening '{' doesn't expands

Piecewise function without `\close`

Showing 1 to 3 of 3 entries

◀ Previous Next ▶

Integral, Sum and Product

Shortcut for integral sign, sum and product signs are `\int`, `\sum` and `\prod`. You can use `_` and `^` for inserting text below and above signs, respectively.

Equation Editor Shortcut	Output	Note
<code>\int<sp>f(x)dx</code>	$\int f(x)dx$	
<code>\int_x=0^1<sp>f(x)dx</code>	$\int_{x=0}^1 f(x)dx$	<code>_</code> for lower limit and <code>^</code> for upper limit
<code>\iint<sp>f(x)dx</code>	$\iint f(x)dx$	<code>\iint</code> for double integral
<code>\iint\below(S)<sp>ds</code>	$\iint_S ds$	use <code>\below</code> to put text below symbol
<code>\iiint\above(V)<sp><sp>dV</code>	$\iiint_V dV$	use <code>\above</code> to put text above symbol
<code>\oint<sp>f(x)dx</code>	$\oint f(x)dx$	<code>\oint</code> for cyclic integral, similarly use <code>\oiint</code> for cyclic double Sum, integral
<code>\sum_{(i=1)^n}<sp>A_i<sp></code>	$\sum_{i=1}^n A_i$	<code>\sum_{(i=1)^n}<sp>A_i<sp></code> for sum symbol and <code>_</code> & <code>^</code> sign for getting text below and above sum. Parenthesis can be used for grouping text with spaces
<code>\prod_{(n=0)^N}<sp>x^n<sp></code>	$\prod_{n=0}^N x^n$	Similar to sum.

Math Autocorrect shortcut provides useful shortcuts for typing most of the mathematical expression. They are often the fastest and efficient way of typing equation in Ms Word.
